Geologic Map of the Nisqually 7.5-minute Quadrangle, Thurston and Pierce Counties, Washington

by Timothy J. Walk, Robert L. Logan, Michael Polen, and Henry W. Schauw

2003

DESCRIPTION

The geologic map is based on the Puget Lowland stratigraphic framework (Colman et al., 1988, 1989; Wilson et al., 1997; Pasteris et al., 2001), which is based on the concept of geographic units.

ACKNOWLEDGMENTS

The authors wish to thank the Washington Department of Ecology and the Washington Department of Transportation for providing the map area, the Washington Department of Natural Resources for providing aerial photography, and the Washington Department of Geology and Earth Sciences for providing the topographic base map.

MAPPING METHODS

The geologic map was created using the Geographic Information System (GIS) software. The map was created using a combination of aerial photography and field observations. The map was created using a combination of aerial photography and field observations. The map was created using a combination of aerial photography and field observations. The map was created using a combination of aerial photography and field observations.
